France Exporter Guide Annual 2005 2005

Approved by: Elizabeth B. Berry

U.S. Embassy

Prepared by: Roselyne Gauthier

Report Highlights:

France offers niche market opportunities in a number of areas such as fish and seafood; processed fruits and vegetables, including fruit juices, beverages including wine and spirits; fresh and dried fruits and nuts.

This report prepared by the USDA's Foreign Agricultural Service for U.S. exporters of food and agricultural products presents a comprehensive guide on France's economic situation, market structure, exporter tips and best prospects for high-value food and agricultural products.

Includes PSD Changes: No Includes Trade Matrix: No Unscheduled Report Paris [FR1] [FR]

SECTION I. MARKET OVERVIEW

1. Macroeconomic Situation

As a member of the G-8, the European Union, the World Trade Organization and the OECD, France is a leading economic player and international force. With a \$2 trillion Gross Domestic Product (GDP), France is the world's fifth largest industrialized economy. The French population of 62 million has a per capita income of \$33,152.

France is the fifth largest trading partner of the United States. U.S. trade with France, including, exports and imports of goods, services and income, per U.S. Department of Commerce data, amounted to \$102 billion in 2004. The United States is the primary recipient of French foreign direct investment and is the third largest foreign investor in France.

Despite one of the best economic performances in the EU in 2004, increasing its GDP 2.1 percent, the French economic recovery has flagged under the weight of high oil prices and the fall of the Euro relative to the dollar, showing only a modest economic growth of 1.5 percent in 2005. The inflation rate has also remained relatively modest, close to 2 percent. The unemployment rate fell to 9.8 percent in September 2005, from its highest level in five years (10.1 percent in January and February 2005). Also in September, the Prime Minister announced measures to stimulate faster economic growth and reduce unemployment, while preserving the benefits of the French welfare model.

For 2006, the Government is forecasting 2-2.5 percent GDP growth and is setting a budget deficit goal of 2.9 percent of GDP. The National Statistical Agency (INSEE) asserts that the government scenario, on which the 2006 budget is based, is unlikely to be achieved absent an immediate acceleration in growth.

2. French Agricultural Production and Consumption

In 2004, agricultural production in France increased 11.2 percent in volume from 2003 due to abundant yields in several key commodities: vegetable production increased 20.5 percent, after a decrease of 13.6 percent in 2003, fruit production increased 8.3 percent, cereal harvests were particularly abundant, up 28.1 percent, and the tender wheat crop production rose by 29.5 percent. Animal production fell by 1 percent in 2004, compared to 2003.

In 2004, total French food and beverage purchases amounted to \$155.7 billion reflecting an overall stable consumption compared to 2003. Total food prices in 2004 increased 0.4 percent compared to 2003. In 2004, fresh fruit prices increased one percent and fresh vegetable prices rose 0.4 percent. The outlook for food and beverage prices in 2005 suggests an overall 0.5 percent increase, coming mostly from fresh products and tobacco.

Fresh fruit and vegetable consumption in 2004 increased significantly due to price stability and health and nutrition campaigns. Fish and seafood prices increased 1.7 percent, beef

meat prices rose 4.4 percent, and pork and delicatessen prices added 0.8 percent while prices decreased 0.9 percent for poultry, 4.1 percent for eggs, 2.2 percent for beer, and just under 1 percent for pastry and desserts. Tobacco consumption fell 18.2 percent in 2004 relative to 2003 due to the negative impact of a 24.5 percent price increase over several years.

3. Key Demographic Developments

As of January 1, 2005, preliminary estimates indicate a total population of 62.2 million, including 2 million for overseas territories. Immigration in France increased by 5 percent in 2004 vs. 2003, but remains the lowest in the European Union compared to the total population. Preliminary 2004 figures show that France has a slightly increasing birth rate and a slightly declining death rate. France should be one of the few EU member states to experience population growth by 2050

France metropole: Population by Age Group (in millions) (As of January 1, 2005)

Year	Total	Less than 20	20 to 64 years	65 years or
		years		more
2000	58.8	15.0	34.4	9.4
2001	59.1	15.0	34.6	9.5
2002	59.5	15.0	34.8	9.7
2003	59.8	15.0	35.1	9.7
2004 (P)	60.2	15.1	35.3	9.8
2005 (P)	60.5	15.1	35.5	9.9

P = Preliminary - Source: INSEE PREMIERE -

France: Demographic Evolution of Households (in millions)

Year	Number of Households
1998	23.9
1999	24.1
2000	24.4
2001	24.5
2002	24.8
2003	25.1
2004	25.4
2005 (P)	25.7

(P) = Preliminary - Source: INSEE - Enquête Budget Famille

According to current trends, the number of households should increase an average of 228,000 per year until 2010.

4. Changing Food Trends

Socio-economic and demographic changes have significantly altered food trends in France. Trends show that French consumers desire food products offering better taste, increased health benefits and more convenience:

- The "younger" generation (26 percent) appreciates trying new products. This generation values products with an image along with "good" taste.
- Food safety scares have raised consumer concerns about sanitation and safety issues. In turn, these concerns have led to greater demand for "natural" and "organic" food products--fruit juices, fresh and processed dietetic foods, organic produce, fish and seafood products, ethnic foods and food supplements.
- Working consumers or those living alone (30 percent) have less time to prepare meals. These consumers are pushing the demand for easy-to-prepare foods, single and double portion packs, and frozen or microwavable meals.

SECTION II. EXPORTER BUSINESS TIPS

1. Trade Barriers and Restrictions

Food products entering the EU and France are subject to customs duties which vary depending on the type of product. Most processed products are subject to additional import charges based on the product contents of sugar, milk fat, milk protein and starch.

Product safety and sanitary standards affecting imports into France are increasingly established at the EU level, however, additional French regulations affect imports as well. Efforts to harmonize EU import regulations and to implement commitments under the World Trade Organization (WTO) may abolish inconsistent and conflicting French and EU regulations, quota conversions, variable levies, and restrictive licensing requirements.

French regulations can act to limit market access for certain U.S. agricultural products including, but not limited to, the following:

- Poultry, meat and eggs
- Enriched flour
- Bovine genetics
- Exotic meat (alligator)
- Flightless bird meat (ratite)
- Live crayfish
- Beef and bison meat
- Fruits and vegetables
- Pet foods
- Co-products derived from genetic modification

For more information on above product trade restrictions, food standards and regulations, please refer to FAS/Paris Food and Agricultural Import Regulations and Standards Report (FAIRS) available on Internet website: http://www.fas.usda.gov

France, like other EU member states, has a network of bilateral and regional trade agreements that is expanding rapidly. The EU has customs union agreements with Turkey and Andorra and 26 free trade agreements under either GATT Article XXIV or GATS Article V. It has free trade agreements (two-way free trade without common external tariffs) and other sorts of preferential trade agreements with Norway, Iceland, Switzerland, Liechtenstein, Bulgaria, Romania, Israel, the Palestinian Authority, Tunisia, Morocco, Jordan, Egypt, Lebanon, Syria, Algeria, Mexico and South Africa. The EU provides ACP countries (African, Caribbean and Pacific developing countries) with non-reciprocal preferential access to its markets under the Cotonou Agreement, and gives other developing countries preferential access under the Generalized System of Preferences (GSP).

2. Consumer Tastes, Preferences and Food Safety

Like U.S. consumers, French consumers want innovative foods. Young consumers like ethnic products with distinctive themes and flavors. In 2004, 75 percent of French consumers ate an ethnic meal at least once a year representing a market of \$185 million (excluding fresh

products), an annual growth of 8 percent, compared to 2003. In Paris, one of every two new restaurants is based on a "world food" concept, and all major supermarket chains offer ethnic foods under their private labels. In the ethnic segment, consumers always need new products. The trends in France currently feature Thai, Northern and Southern African and Indian cuisine. However, Tex-Mex, Cajun or California-style cuisine, sports drinks and vitamin enriched snacks still have potential. Ready-to-eat products such as frozen food products, seafood (particularly salmon), wild rice, innovative dietetic/health products, organic products, frozen desserts and kosher foods are also gaining popularity.

While many consumers and distributors are receptive to new developments in food products, they want more information on product contents and manufacturing processes. France has labeling requirements for both domestically-produced and imported food products containing genetically-modified products or biotech-derived ingredients or additives.

After the different food scares, the French Government encouraged the development of quality marks such as "Label Rouge" (Red Label) for meats, poultry and fruits and vegetables, which guarantee production under established conditions and product origin labels which guarantee that, for instance, certain wines, milk, butter, or cheeses are sourced from a certain region. The government also continues a certification program which guarantees that product preparation, manufacturing and packaging processes follow certain specifications. These quality and origin marks have been well received by French consumers who support guarantees in the products they consume. The organic food program certifies that agricultural and food products were manufactured without chemical fertilizers and according to special criteria. The Government of France recently launched a new development program hoping to make France a European leader in organic agriculture.

3. Marketing Strategies for the French Market

(a) U.S. food product exporters should consider:

Market access restrictions and food laws

- > Check EU and French regulations to ensure your products can enter the French market and carefully verify the list of ingredients and additives.
- Verify customs clearance requirements and any additional import charges based on percentage of sugar, milk fat, milk protein and starch in the product.

Consumer characteristics

- > Target dual income families, singles, senior citizens and health and environmentally-conscious consumers.
- > Influence consumer choices mostly through advertising campaigns.

Seasonal characteristics

- Holiday promotions
- ➤ In-store supermarket promotions

Unique U.S. products characteristics

High quality

Regional specialties (i.e., Florida grapefruit, California wine, Tex-Mex or Cajun style, New England seafood, etc.)

Image appeal

Packaging can help a product find a niche in this market, particularly if the U.S. firm has access to stores and supermarkets that specialize in U.S. or foreign foods.

Trade Shows and In-Store Promotions:

- ➤ Trade shows, in-store product demonstrations can help to familiarize French consumers with U.S. food products.
- > Trade shows are an excellent way to introduce new products to the market.
- (b) Successful Export Planning for Your Products:
 - Conduct basic market research and review export statistics of the last five years.
 - Contact the Office of Agricultural Affairs at the American Embassy in Paris to obtain up-to-date information on local government regulations, customs duties, politics, demographics, infrastructure, distributions channels and market size.
 - Adapt your product to local regulations: give the customer what they require, not what you think is needed, check your ingredients and package size requirements, verify consumers' preferences and make sure your product is price competitive.
 - ➤ Identify the best distribution channel for the product, i.e., supermarkets, an importer/distributor, or a foreign agent. Be prepared to send samples.
 - Work with your agent, distributor/importer to determine the best promotional strategy. Be prepared to invest in the market promotion of your products (through trade shows, in-store promotions or advertising campaigns, to gain maximum exposure and make valuable market contacts). Also, be aware that promotional assistance is available for U.S. products through a variety of branded and generic promotion programs through the four State regional trade groups: FOOD EXPORT USA-NORTHEAST, SUSTA, WUSATA and MIATCO. (Addresses, telephone, fax and contact information for these four groups are listed in Section V, Appendix B, of this report).

4. General Import and Inspection Procedures

General Import Requirements

Import and export transactions exceeding 12,500 Euros (approximately \$15,000) in value must be conducted through an approved banking intermediary. Goods must be imported/exported no later than six months after all financial and customs arrangements have been completed.

For products originating in countries other than EU member states or participants in the World Trade Organization (WTO), and for a limited number of products considered to be sensitive, a specific import/export license may be required by product or by category of products. Otherwise, the following shipping documents in French are required:

- Commercial invoice:
- Bill of landing or air waybill;
- Certificate of origin
- Sanitary/health certificate if need be (depending on the products)

Note: U.S. exporters must make sure their products comply with French regulations and must verify customs clearance requirements with local authorities through their contacts before shipping the products to France. The Office of Agricultural Affairs of the American Embassy in Paris can provide assistance and information on these matters.

Basic Labeling/Packaging Requirements:

Labels should be written in French and include the following information:

- Product definition
- Shelf life: Indicate "used by," and "best before" dates and other storage requirements
- Precautionary information or usage instructions, if applicable
- Statement of contents: ingredients, weights, volumes, etc., in metric units. All additives, preservatives and color agents must be noted on the label with their specific group name or their "E" number
- Product's country of origin and name of importer or vendor within the EU
- Manufacturer's lot or batch number

For biotech labeling and traceability (T&L) and Novel Feed/Novel Food, two new EU regulations have recently been published. According to the T&L regulation, biotech products and biotech-derived products need to be identified "from the seed to the fork" at each stage of market release. A unique code will be attributed to each genetic event to facilitate communication among operators. The T&L regulation imposes the labeling of any food or feed product derived from biotech, whether biotech DNA is detectable in the final product or not. The threshold under which labeling is not compulsory is set at 0.9% for both human food and animal feed. A threshold on planting seeds has not yet been established.

For more details, see the French Ministry of Agriculture website on biotech: http://ogm.agriculture.gouv.fr/savoir_plus/fiches/fiche6.htm, as well as the following Post report: http://www.fas.usda.gov/gainfiles/200507/146130344.pdf

Customs Process

- A person or company can facilitate customs clearance for imports so long as they can present the French Customs Authorities at the port of entry or at the airport in France with the imported goods and the necessary accompanying documents. To ease the clearance process, the U.S. exporter should have the customs clearance done by either a forwarding agent or his importer/distributor or agent in the country of destination. More information may be obtained from the General French Customs Authorities listed in Section V, Appendix C, of this report.
- Generally, a visual inspection consists of verifying that products are accompanied by the correct shipping documents.
- A detailed inspection may include sampling or a chemical analysis test.
- The speed of the customs clearance procedure can depend on the thoroughness of U.S. exporters' documentation.
- When released, the foodstuffs are subject to ad valorem customs duties levied under the Common External Tariff. Duties differ according to product. Also, in addition to customs duties, foodstuffs imported into France are subject to a Value-Added Tax (VAT). Currently the VAT is generally charged at one of the two following rates:
 - Standard rate of 19.6 percent applies to alcoholic beverages, some chocolates and candies
 - Reduced rate of 5.5 percent applies mostly to agricultural and food products.

SECTION III. MARKET SECTOR STRUCTURE AND TRENDS

1. The French Food Industry

- The food industry is the largest French industrial sector, accounting for 32 percent of the total economy's added value. France is the world leader in processed food exports, worth 28.8 billion Euros (\$35.7 billion) in 2004, approximately 10 percent of the global trade in processed foods. The French food processing industry is number one in Europe ahead of Germany and number two in the world following the United States.
- France currently has 30 major food processors, and over 10,800 food industry companies.
- According to the French Food Industry Association (ANIA), in 2004, food processing sector sales were 138 billion Euros (\$171 billion), an increase of 1.5 percent from the 2003 level.
- In 2004, the French food industry continued to restructure in the face of greater competition from large multinational groups and the globalizing effects of the Euro.
- Total food exports in 2004: 28.8 billion Euros (\$35.7billion), a 0.7 percent increase in value over 2003.
- Total food Imports in 2004: 20.7 billion Euros (\$25.7 billion), 1.5 percent increase in value over 2003.

Food Processing	2004 Value (In	Percent Price

Source: INSEE - National Account

2. Infrastructure Situation

France's transportation infrastructure is among the most sophisticated in the world, benefiting from advanced technology and extraordinary investment by the Government. The three main entry points for air-freight are Orly and Charles de Gaulle airports in Paris and Saint-Exupéry airport in Lyon. France has twelve major seaports, many of which are equipped for container ships. There is also an extensive highway and river-transport system, and a state-owned rail network that is among the most comprehensive and technologically advanced in the world.

Communications infrastructure is similarly advanced. Telephone lines blanket the country and there is easy access to the Internet via French and foreign service providers. France is catching up rapidly to the U.S. and some other countries in the use of personal computers and the Internet. High-speed Internet access is expanding rapidly. The government continues promoting better use of information technologies.

3. Market Trends

The French market for food products is mature, sophisticated and well served by suppliers from around the world. Additionally, an increasing interest in American culture, younger consumers and changing lifestyles contribute to France's import demand for American food products. Generally, high quality food products with a regional American image can find a niche in the French market, particularly if they gain distribution through stores and supermarkets that specialize in U.S. or foreign foods. Niche market opportunities also exist for regional American foodstuffs (Tex-Mex, Cajun and California cuisine), candies and chocolates, wild rice, and organic and health food products, as well as kosher and halal foods.

The French food service industry is moving towards fresh consumer-ready products at the expense of frozen foods.

4. Marketing U.S. Products & Distribution Systems

The United States and France produce many of the same goods and services and export them to each other. Therefore, marketing products and services in France can bear some resemblance to marketing in the United States. French business representatives are sophisticated and knowledgeable about their respective markets. At the same time, American firms must take into consideration certain business practices, cultural factors, and legal requirements in order to do business effectively in France. For detailed information on the distribution systems and the best market entry approach for new-to-market exporters for the retail food sector, see Post Retail Food Sector Report, on AgParis website at: www.amb-usa.fr\fas\fas.htm, or on the FAS website at: www.fas.usda.gov.

The Hotel/Restaurant Institutions (HRI) sector in France uses the services of wholesalers or processed food buyers, and the well developed distribution channels of the wholesalers/importers are often the key to getting a new food product into that sector. A report on the HRI sector in France is available at the above website.

SECTION IV. BEST HIGH-VALUE PRODUCT PROSPECTS

There are significant market opportunities for consumer food/edible fishery products in a number of areas: fruit juices and soft drinks (including flavored spring waters), dried fruits and nuts, fresh fruits and vegetables (particularly tropical and exotic), frozen foods (both ready-to-eat meals and specialty products), snack foods, tree nuts, "ethnic" products, seafood (particularly salmon & surimi), innovative dietetic and health products, organic products, soups, breakfast cereals and pet foods. In addition, niche markets exist in France for candies, chocolate bars, wild rice, kosher and halal foods. Market opportunities for U.S. exporters also exist for oilseeds, protein meals and other feeds, as well as for wood products and grains.

Listed below are six consumer-oriented food products considered by the Office of Agricultural Affairs as representing the "best prospects" for U.S. business.

Top 6 Market Opportunities for Consumer-Oriented Food Products (USD million)

Comments: France is a major consumer of seafood products and a net importer of many seafood products because domestic production is significantly lower than demand. In 2004, the best export opportunities for U.S. seafood were Alaska Pollack fillets, surimi base,

salmon, lobster, and scallops. In 2004, salmon remained the French consumers' preferred fish. U.S. salmon exports to France in 2004 were favored by the U.S. dollar/euro exchange rate and a French media campaign against farm-raised European salmon. The U.S. market share of groundfish fillet products increased from 7 percent to 9 percent in 2004 and the potential for continued growth remains positive. The United States was France's largest supplier of live lobster in 2004 ahead of Canadian lobster. The United States has become a major supplier of scallops to France and this trend continued in 2005. France is the largest market for surimi in Europe and the United States is France's leading supplier of surimi base. (For further information, please see annual seafood report FR5065 dated October 3, 2005) which can be found on the following website: www.fas.usda.gov (attaché reports).

2. Name of Best Prospect: **PROCESSED FRUITS AND VEGETABLES, INCLUDING FRUIT JUICES**

Comments: Fruit juices and soft drinks in France are currently the most dynamic growth sectors among non-alcoholic beverages, with a per capita consumption of fruit juices estimated at 22 liters a year. The French fruit juice market is very sophisticated due to the experience of distributors, variety of packaging, diversity of flavors and quality types, product innovation, advertising investment and promotions, as well as price ranges. As per French Customs statistics, in 2004, French imports of fruit juices totaled about 575 million Euros (\$713 million). The primary imports from the United States consist of fresh and frozen orange and grapefruit juices and amounted to \$10.4 million in 2004. Competition in juices is very strong, principally from Brazil, Israel and Spain, which benefit from preferential tariffs.

3. Name of Best Prospect: **BEVERAGES**, **INCLUDING MINERAL WATER**, **BEER**, **WINE AND SPIRITS**

HS Codes: 22.01 to 22.06 and 22.07+22.08 (in million dollars)

Source: French Customs/SCEES - French Ministry of Agriculture

Comments: In 2004, French imports of U.S. wine totaled 16 million Euros (\$20 million), representing 3.2 percent of total French wine imports by value. Most American wines sold in France are bulk wines. U.S. wines in France face strong competition from Italy, Spain and

Greece as well as from new world countries such as Australia, South Africa and Chile. However, market opportunities exist for U.S. wines in France thanks in part to the "exoticism" and quality of the products and the promotional efforts made by American themed restaurants in France.

The French are also significant consumers of spirits. In 2004, U.S. spirits exports to France were valued at 30 million Euros (\$37 million) representing 4.5 percent of total French spirits imports estimated at 667 million Euros (\$827 million).

Opportunities exist for ethnic, new and innovative U.S. products, particularly those that can be linked with Tex-Mex foods. Also, sales of innovative products such as beer with whiskey malt are on the rise, as are sales of non-alcoholic beers and "panaches" (mixture of beer and lemonade).

Currently, the French beer industry consists of 24 breweries with two American brewers present in the French market: Anheuser-Bush and Miller. The French beer market is valued at 2,045 million Euros (\$2.54 billion), representing about 11 percent of total alcoholic and non-alcoholic beverage sales and two percent of total food and beverage sales in France. Annual per capita consumption of beer in France is estimated at 39 liters.

4. Name of Best Prospect: **FRESH AND DRIED FRUITS**, **INCLUDING NUTS** HS 08 (in million dollars)

		2002	2003	2004
			January / December	
Α.	Total Market Size	3,281	3,518	3,949
B.	Local Production	2,404	2,145	2,170
С.	Total Exports	1,506	1,714	1,749
D.	Total Imports	2,383	3,087	3,528
E.	Total Imports from U.S.	115	132	160

Comments: The best opportunities for U.S. suppliers are in off-season and extended-season sales, and years of short French fruit crops. France is one of the most important markets for U.S. grapefruit (mostly from Florida), valued at 23 million Euros (\$29 million) in 2004, representing a commanding 35 percent of total French imports. France also imports apples and pears (in short crop years). There is also a niche market for berries, cherries and tangerines. In 2004, U.S. fresh fruit exports to France were valued at 26 million Euros (\$32 million).

The snack and nut product niche market is important for U.S. exporters, who profit from promoting their products as healthy and high-quality choices. Dried fruits and nuts, generally salted, are mainly consumed as snacks with aperitifs. Among the most popular snacks are cashews, almonds, pecans, hazelnuts and pistachios, all of which sell best when merchandised in bulk packages. French consumption of these products has doubled over the past seven years as the French now snack between meals. Although France is a significant grower of walnuts, French import demand is primarily determined by the size of the domestic production. The United States remains France's leading supplier of in-shell walnuts whereas Moldova and China provided the bulk of shelled imports.

5. Name of Best Prospect: **FRESH AND DRIED VEGETABLES**

Hs Code: 07 (in million dollars)

	2002 Janı	2003 uary / December	2004
	Jane	daily / Decerriber	
A. Total Market Size	5,940	4,988	5,362
B. Local Production	5,646	4,550	4,861
C. Total Exports	1,358	1,630	1,751
D. Total Imports	1,652	2,068	2,252
E. Total Imports from U.S.	18	24	17

Source: French Customs/SCEES - French Ministry of Agriculture

Comments: Very few opportunities exist in this market for U.S. fresh vegetables, except for green asparagus, and maybe some superior quality and produced off-season fresh vegetables such as eggplant, zucchini, sweet peppers and iceberg lettuce. However, trends and increased consumption indicate growing demand for fresh prepared vegetables (washed and cut) and many supermarkets have a special section for these types of products. There is also a growing demand for organic vegetables.

U.S. rice exports to France increased 4.6 percent in value during 2004, compared to 2003 to reach \$15 million; while other dried vegetable imports from the United States decreased 27.7 percent valued at \$16 million. However, dried beans, peas and lentils offer significant opportunities for U.S. suppliers.

6. Name of Best Prospect: **MEAT AND OFFALS** HS Code: 02 (in million dollars)

		2002	2003	2004
			January / December	
Α.	Total Market Size	7,812	7,640	7,890

F. Exchange Rate: USD 1.00 = Euros: 1.057 Euros: 0.884 Euros: 0.806 Source: French Customs/SCEES - French Ministry of Agriculture

Comments: Opportunities in this market are limited given the import quota on meat and stringent EU veterinary regulations. The most prominent meat import from the United States is horsemeat which was valued at \$26 million in 2004, while pork meat imports amounted to \$2 million and beef imports \$61,000, a decrease of 93 percent in beef meat imports in 2004, compared to 2003. Bison meat is getting more and more popular in France; mosly of Canadian origin, but there might be opportunities for U.S. products. Currently, the annual EU meat import quotas are as follows:

- -Beef meat (hormone-free): 11,700 tons yearly for Canada and the United States;
- -Pork meat: Approximately 70,000 tons for all third countries.

For more information and the enlargment compensation agreement between the U.S. and the EU, please visit the following website: www.useu.be

SECTION V. KEY CONTACTS AND FURTHER INFORMATION

For further information contact:
Office of Agricultural Affairs
American Embassy
2, avenue Gabriel - 75382 Paris Cedex 08

Tel: (33-1) 43 12 2264 Fax: (33-1) 43 12 2662 Email: <u>agparis@usda.gov</u>

homepage: http://www.amb-usa.fr/fas/fas.htm

For more information on exporting U.S. food products to France, visit our homepage. The OAA homepage includes information on the HRI and Retail food sector, Food and Agricultural Import Regulations and Standards, product briefs on the market potential for U.S. products, upcoming promotional trade shows and fairs in France. Importer lists are available from our office to exporters of U.S. food products.

For more information on exporting U.S. agricultural products to other countries, please visit the Foreign Agricultural Service home page: http://www.fas.usda.gov
